Insights from Gartner

Problem Statement

Enterprise employees waste operational time and experience productivity bottlenecks due to siloed enterprise systems, requiring multiple logins, manual data navigation, and inconsistent support.

Legacy routing of queries (to IT, HR, Sales, etc.) is slow, with fragmented compliance and support processes across SaaS platforms.

Gartner and other market analyses consistently cite routine task overhead, slow help desk responses, and multi-app switching as top productivity killers. In a survey of digital workplaces, staff spend 20–30% of their day navigating support channels and business systems.

Enable users to find the

Agent Builder: A Foundation for Building Data-Driven AI Agents

One Workflow

Power the shift **from insight to automated outcomes**, faster and more intelligently than ever before, by introducing native workflow automation capabilities across Search, Observability, and Security.

Senses

Data Foundation:

Collect everything that matters with ease. See across your entire ecosystem. At scale.

Brain

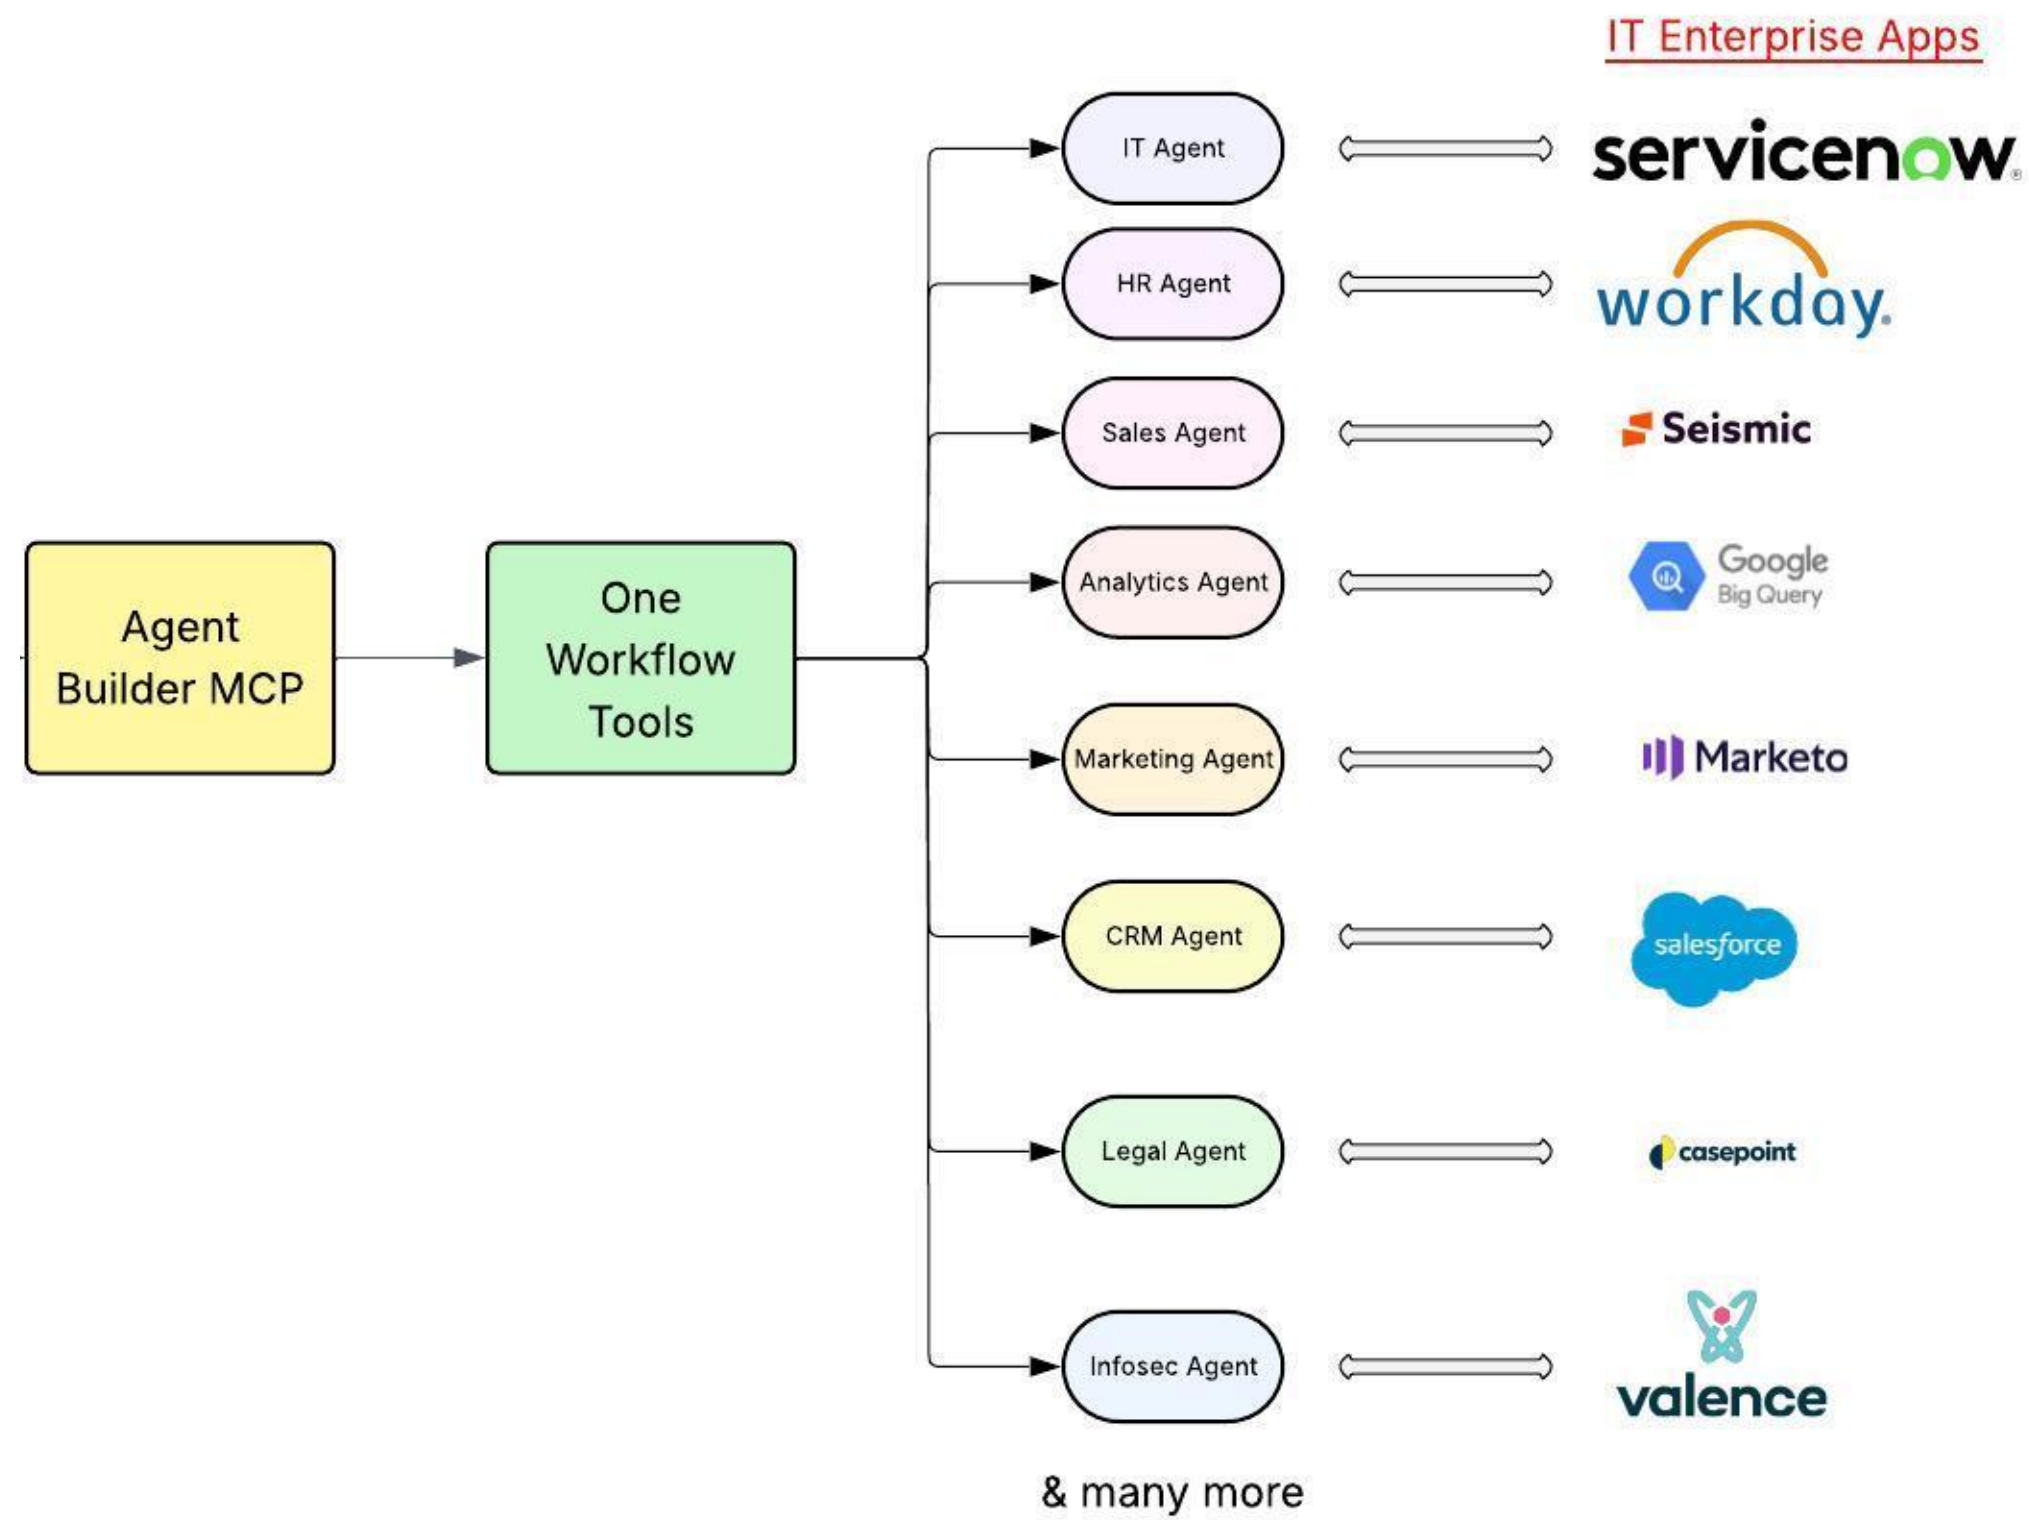

Search AI Platform:

Find signals in the noise.
Understand what matters.

Hands

One Workflow:

Automated outcomes.
Cross-system orchestration.
Intelligent responses.

How to get **involved**

Interested in presenting? We would love to hear from you. We welcome lightning talks, deep dives and everything in between.

Help us grow the user group! Bring a friend or colleague to our next meetup.

Is your company interested in hosting? We love working with local community members and their companies on joint events. Hosting a meetup is also a great recruiting opportunity. And as always, Elastic would cover the pizza, beer and swag! 🍺

Do you know of an affinity meetup chapter (a group for developers interested in various technology) that we could partner with for a joint event? Let us know. We love collaborating with local tech groups.

Something else? Feel free to reach out to us to chat more:
