Agenda:

- Pain point
- Architecture, Tools & Configuration
- Demo

Pain Point :

“Your system has never actually failed in production. So you have no idea what happens when it does.”

The Project:

- 11 microservices, multiple languages, real gRPC traffic
- 3 Kubernetes nodes on AWS
- Full observability via Elastic stack
- Cilium handling all networking with eBPF

Tools:

- **k3s** - Kubernetes but lightweight
- **Cilium** - eBPF Networking + Hubble
- **LitmusChaos** - Chaos Engineering
- **ELK** - Observability

Demo (Let’s see if this works)
