What is Elastic Agent Builder?

Elastic Agent Builder

ELASTIC AGENT BUILDER ARCHITECTURE

Elastic Cloud/Elastic Stack Implementation

Core Architectural Components

1. Elasticsearch

- Vector Store
- Long-term memory
- Structured + unstructured data

2. Elastic Inference API

- Embedding models
- LLM inference

3. Agent Builder

- Planning engine
- Tool registry
- Workflow execution

4. External Tools

- REST APIs
- Aggregations
- Business logic services

Create a Custom Tools

```
POST kbn://api/agent_builder/tools
{
  "id": "example-books-esql-tool",
  "type": "esql",
  "description": "An ES|QL query tool for getting the book with the most
pages",
  "configuration": {
    "query": "FROM kibana_sample_data_agents | SORT page_count DESC |
LIMIT 1",
    "params": {}
  }
}
```

Shell

Parameterize Tool

```
PUT knb://api/agent_builder/tools/example-books-esql-tool
{
  "description": "Find the longest books published before a certain year",
  "configuration": {
    "query": "FROM kibana_sample_data_agents | WHERE
DATE_EXTRACT(\"year\", release_date) < ?maxYear | SORT page_count DESC |
LIMIT ?limit",
    "params": {
      "maxYear": { "type": "integer", "description": "Maximum year to
filter books (exclusive)" },
      "limit": { "type": "integer", "description": "Maximum number of
results to return" }
    }
  }
}
```

Shell

Create a Custom Agent

```
```bash
POST kbns://api/agent_builder/agents
{
 "id": "books-search-agent",
 "name": "Books Search Helper",
 "description": "Searches and analyzes our books collection",
 "labels": ["books", "search"],
 "avatar_color": "#BFDDBF",
 "configuration": {
 "instructions": "You are a helpful agent that assists users in searching and analyzing book data from the kibana_sample_data_agents index. Help users find books by author, title, or analyze reading patterns.",
 "tools": [
 {
 "tool_ids": [
 "example-books-esql-tool",
 "platform.core.search",
 "platform.core.list_indices",
 "platform.core.get_index_mapping",
 "platform.core.get_document_by_id"
]
 }
]
 }
}
```
```

Converse with Custom Agents

```
POST kbn://api/agent_builder/converse
```

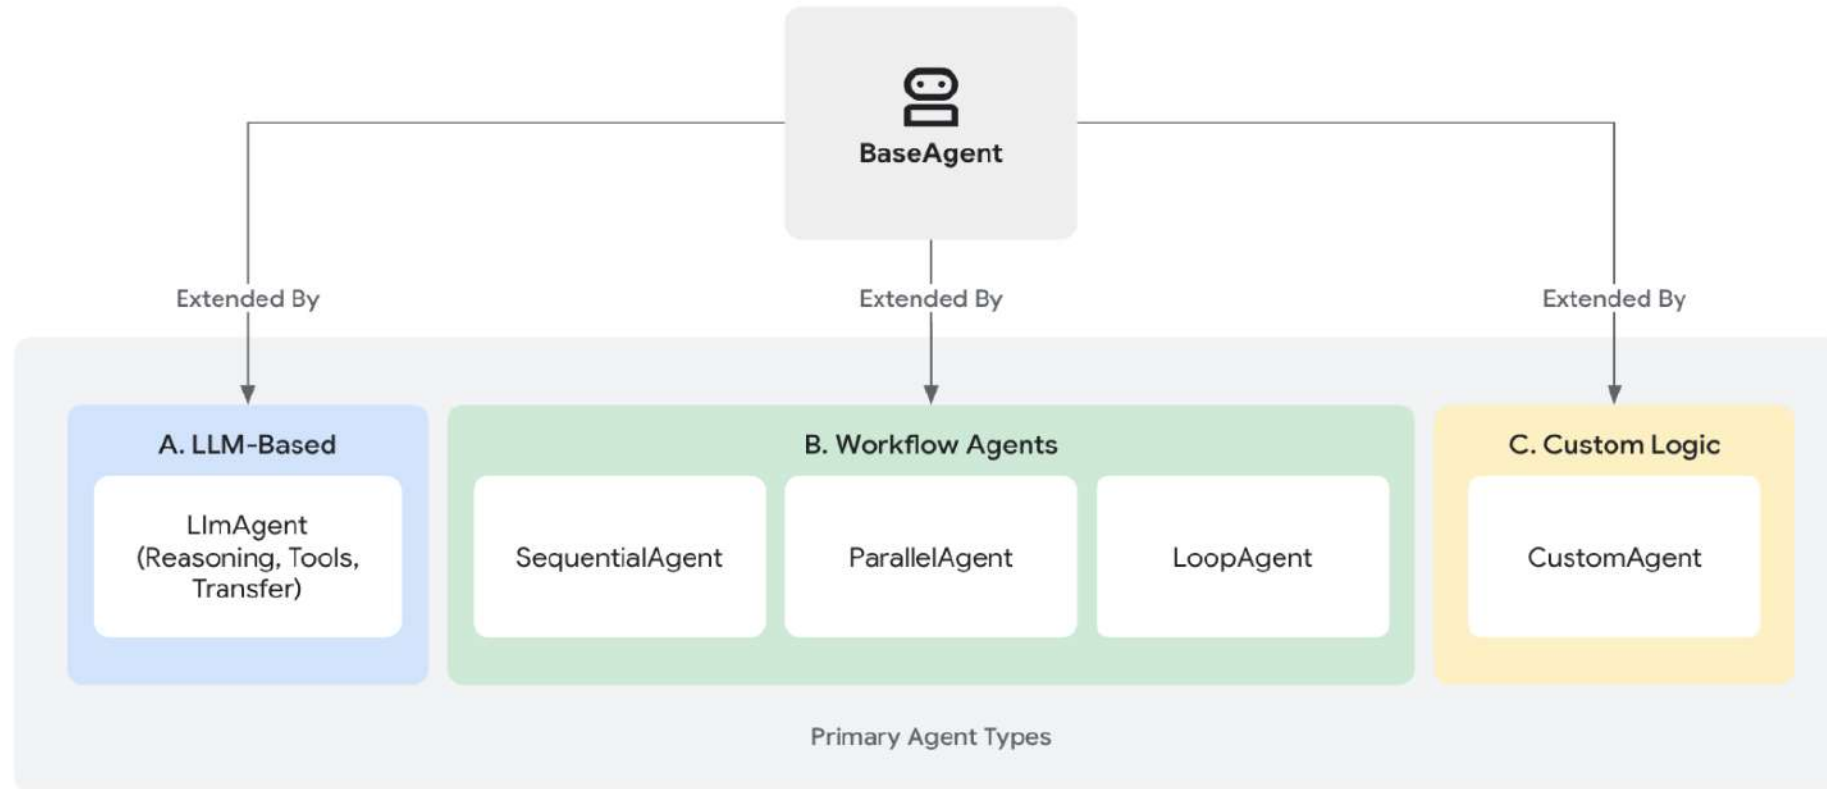

Shell

```
{  
  "input": "Can you find the longest book published before 1960?",  
  "agent_id": "books-search-agent"  
}
```

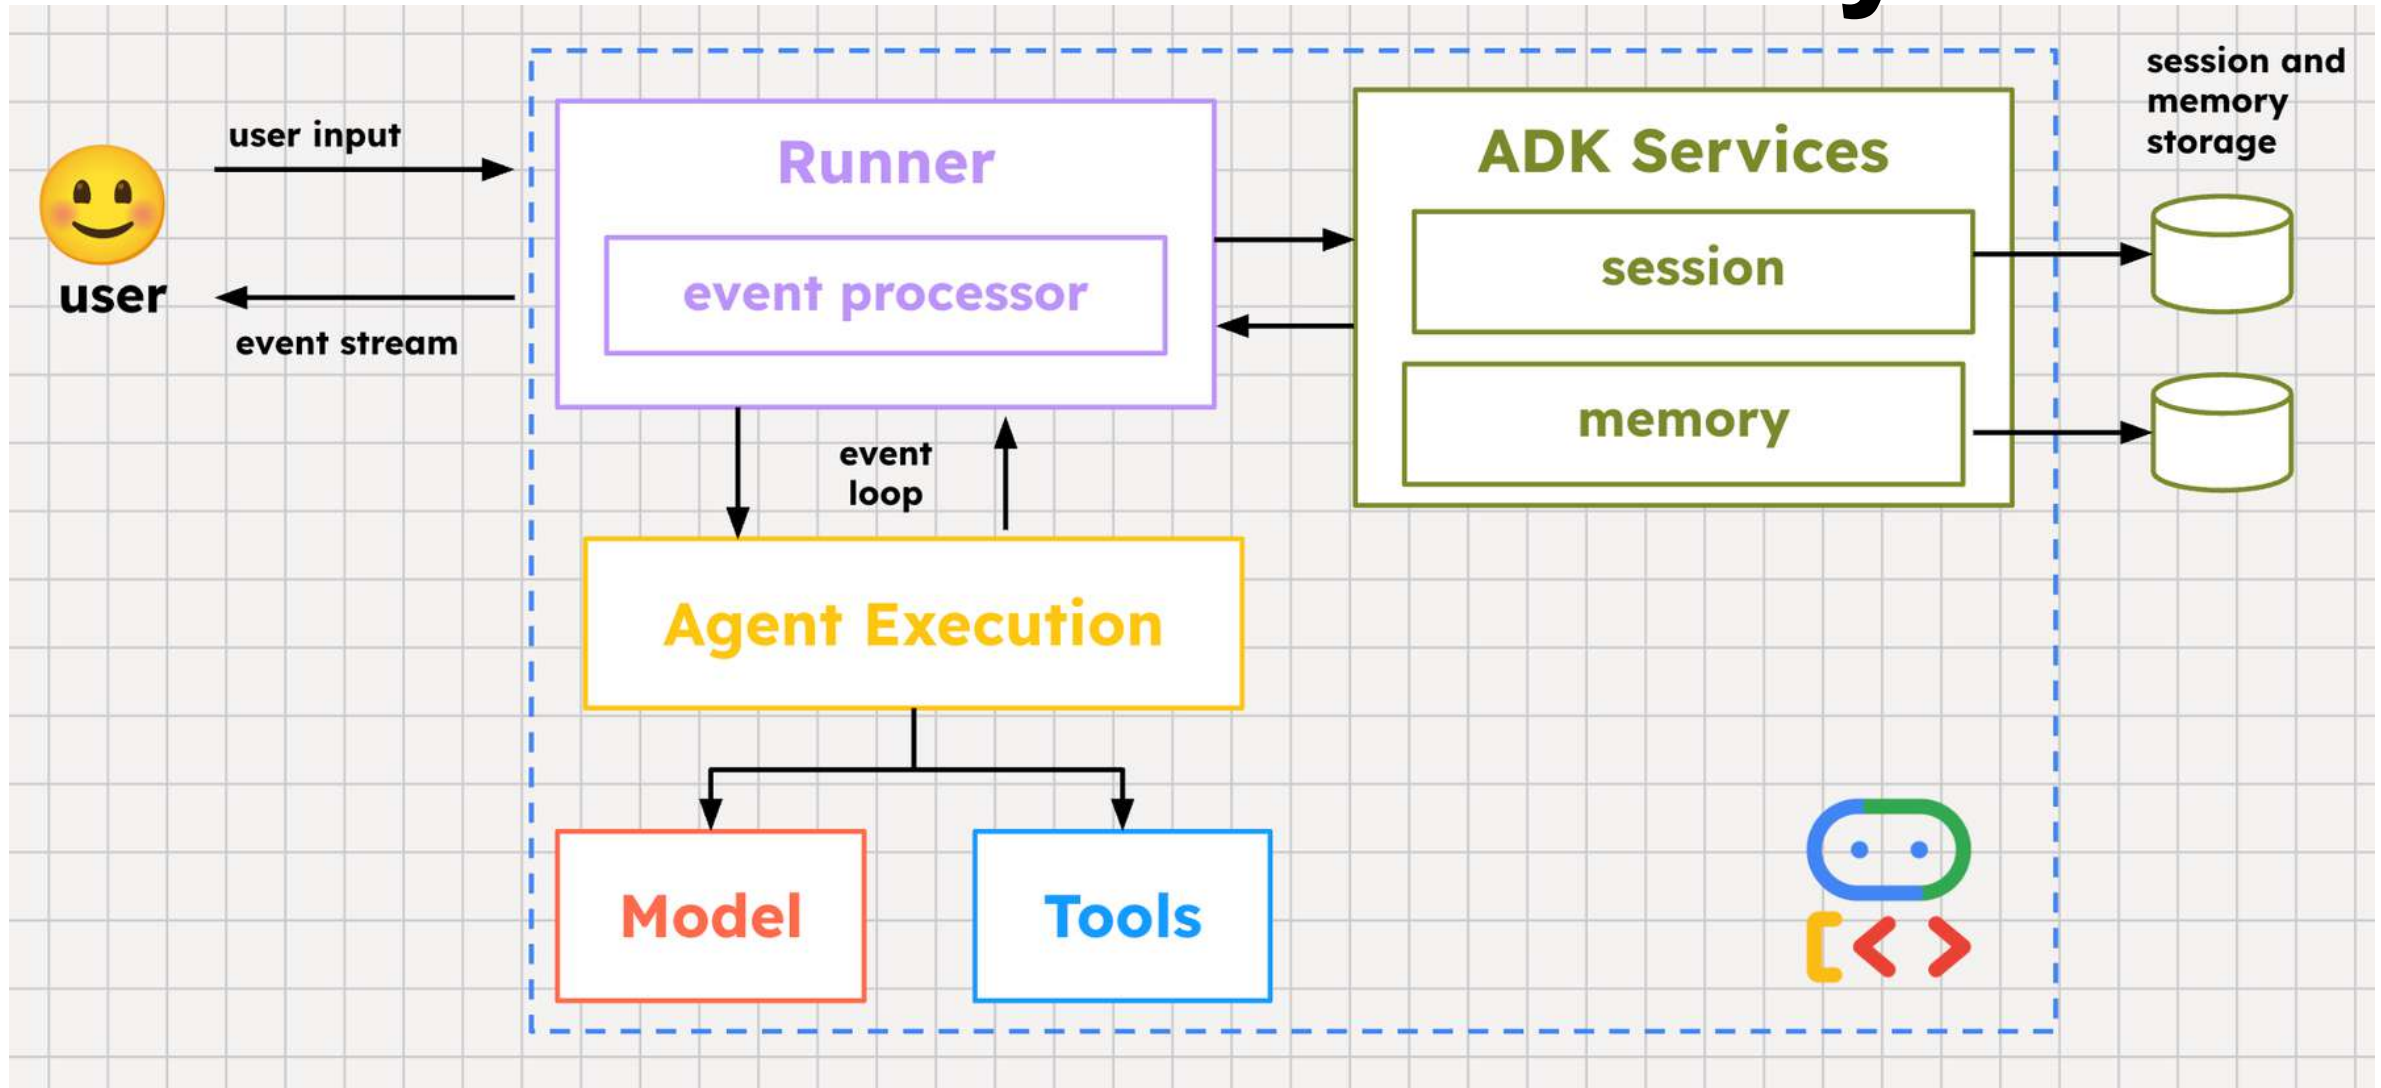

Google ADK

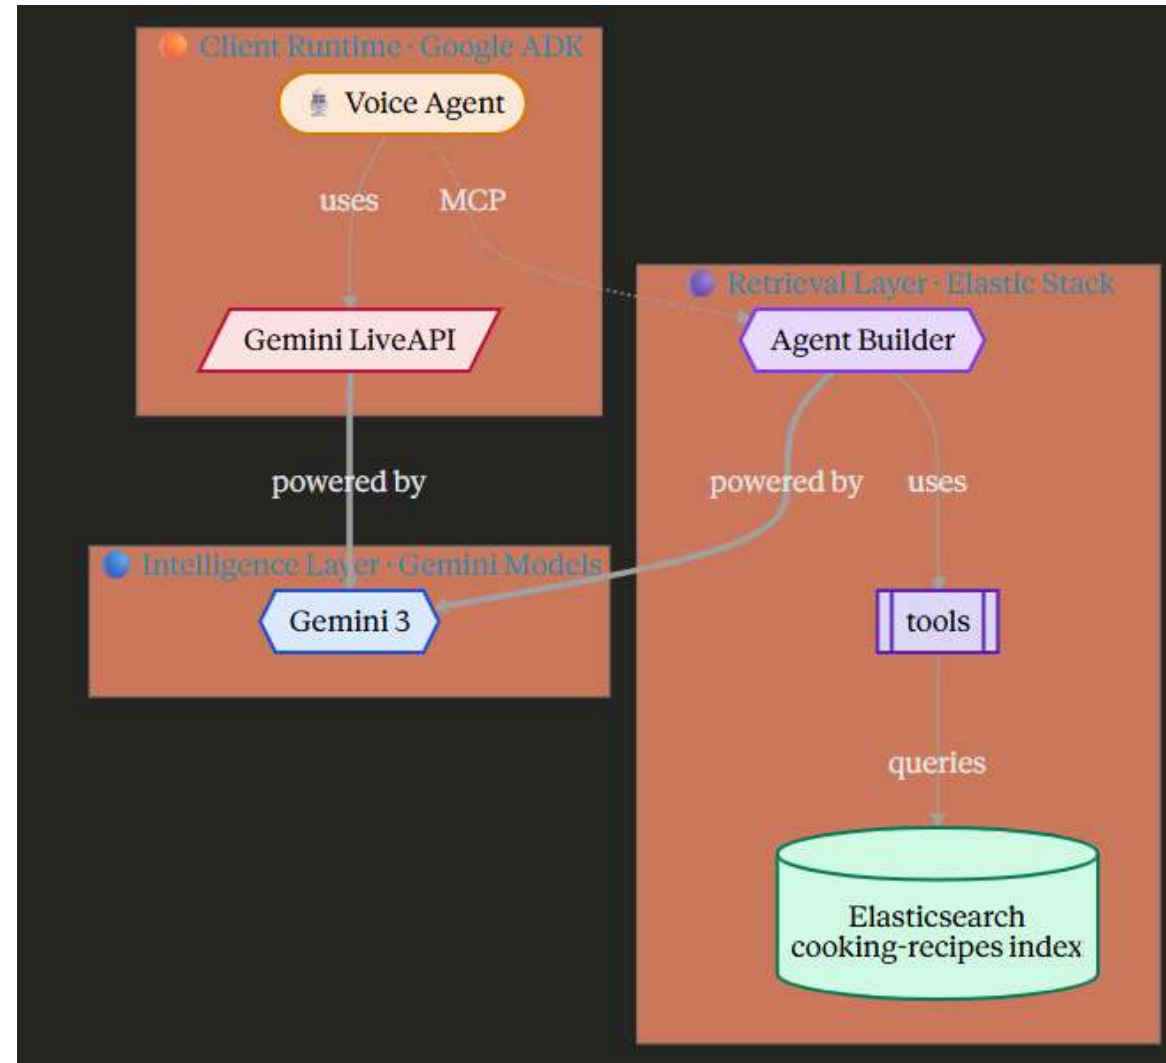

ADK Agent Types

ADK Session Memory

What we're building

Let's Dive into Demo!!!
