

Laptop Refresh with Agent Builder and Workflows

Presenter: Akmal Ziyad
Date: May 30th 2026

Agenda

- Project Scope
- Current State
- Future State Concept
- The project approach & timeline
- The project team / roles & responsibilities

Project Scope

In-Scope

- End-to-end laptop request automation via ElasticGPT
- Integration with ServiceNow, Jamf, and Intune
- Automated status tracking and user notifications
- Real-time Kibana dashboards for IT LT oversight

Key Objectives

- Reduce manual data entry by 80%
- Shorten fulfillment lifecycle from days to minutes
- Ensure 100% data fidelity across systems of record
- Eliminate manual G-Sheet dependencies

The Reality Today & The High-Level Opportunity

Current Challenges

- Highly manual refresh workflows
- Delays across teams
- Inconsistent employee experience
- Many systems, no orchestrator
- High operational cost

Automation Fit

A predictable, rule-based process perfect for automation via ElasticGPT.

Current vs Future State

STEP	CURRENT STATE	FUTURE STATE
Elastician reviews policy to confirm eligibility.	~2 minutes (search for and read knowledge article)	A few seconds
Elastician submits initial request.	• 10 pages; 24 fields manually filled out • ~ 2 min • 240+ requests submitted	Via ElasticGPT • 1 initial prompt; 5 manual responses • ~1 min • Keep/Return option embedded in process
IT Ops confirms eligibility.	• Form manually checked once a month. • Google Form as source of truth (privacy/compliance risks; lack of controls).	Via HAE • 30 sec auto-confirm via SNOW • 7 fields manually filled out • Keep/Return option embedded
Elastician is told to return old laptop.	3+ emails sent (triggered before new laptop is shipped).	Curated Campaign [FUTURE ENHANCEMENT]
Laptop is shipped.	No address or shipping confirmation.	Confirmation prior to shipping [FUTURE]
Old laptop status.	• Google Form (14 pgs) + HELP ticket (~2.5 min) • 0 reminders	Early decision on old laptop with automated follow-ups.

Demo

Learn to build a fullstack app

This is a fullstack app built with React, Node.js, Express, MongoDB, and GraphQL.

1. Introduction

1.1. Introduction

1.1.1. Introduction

1.1.2. Introduction

After a few minutes, you will see a message in the console: `100% Fullstack - 1.1.1`

Let's see how we can use the `100% Fullstack` app. First, let's see how we can use the `100% Fullstack` app.

100% Fullstack - 1.1.1
