

Adapting to AI in security

Best practices for autonomous AI and human interaction

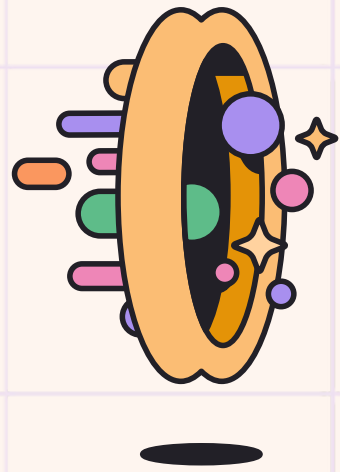

About **Tines**

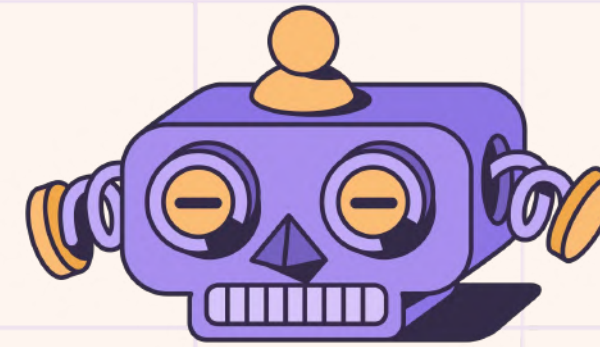

Powering the world's most important workflows

We believe that by combining automation and human ingenuity, organizations will be more efficient, more secure and have more engaged, happier teams.

AI has the potential to
change **how everyone
works.**

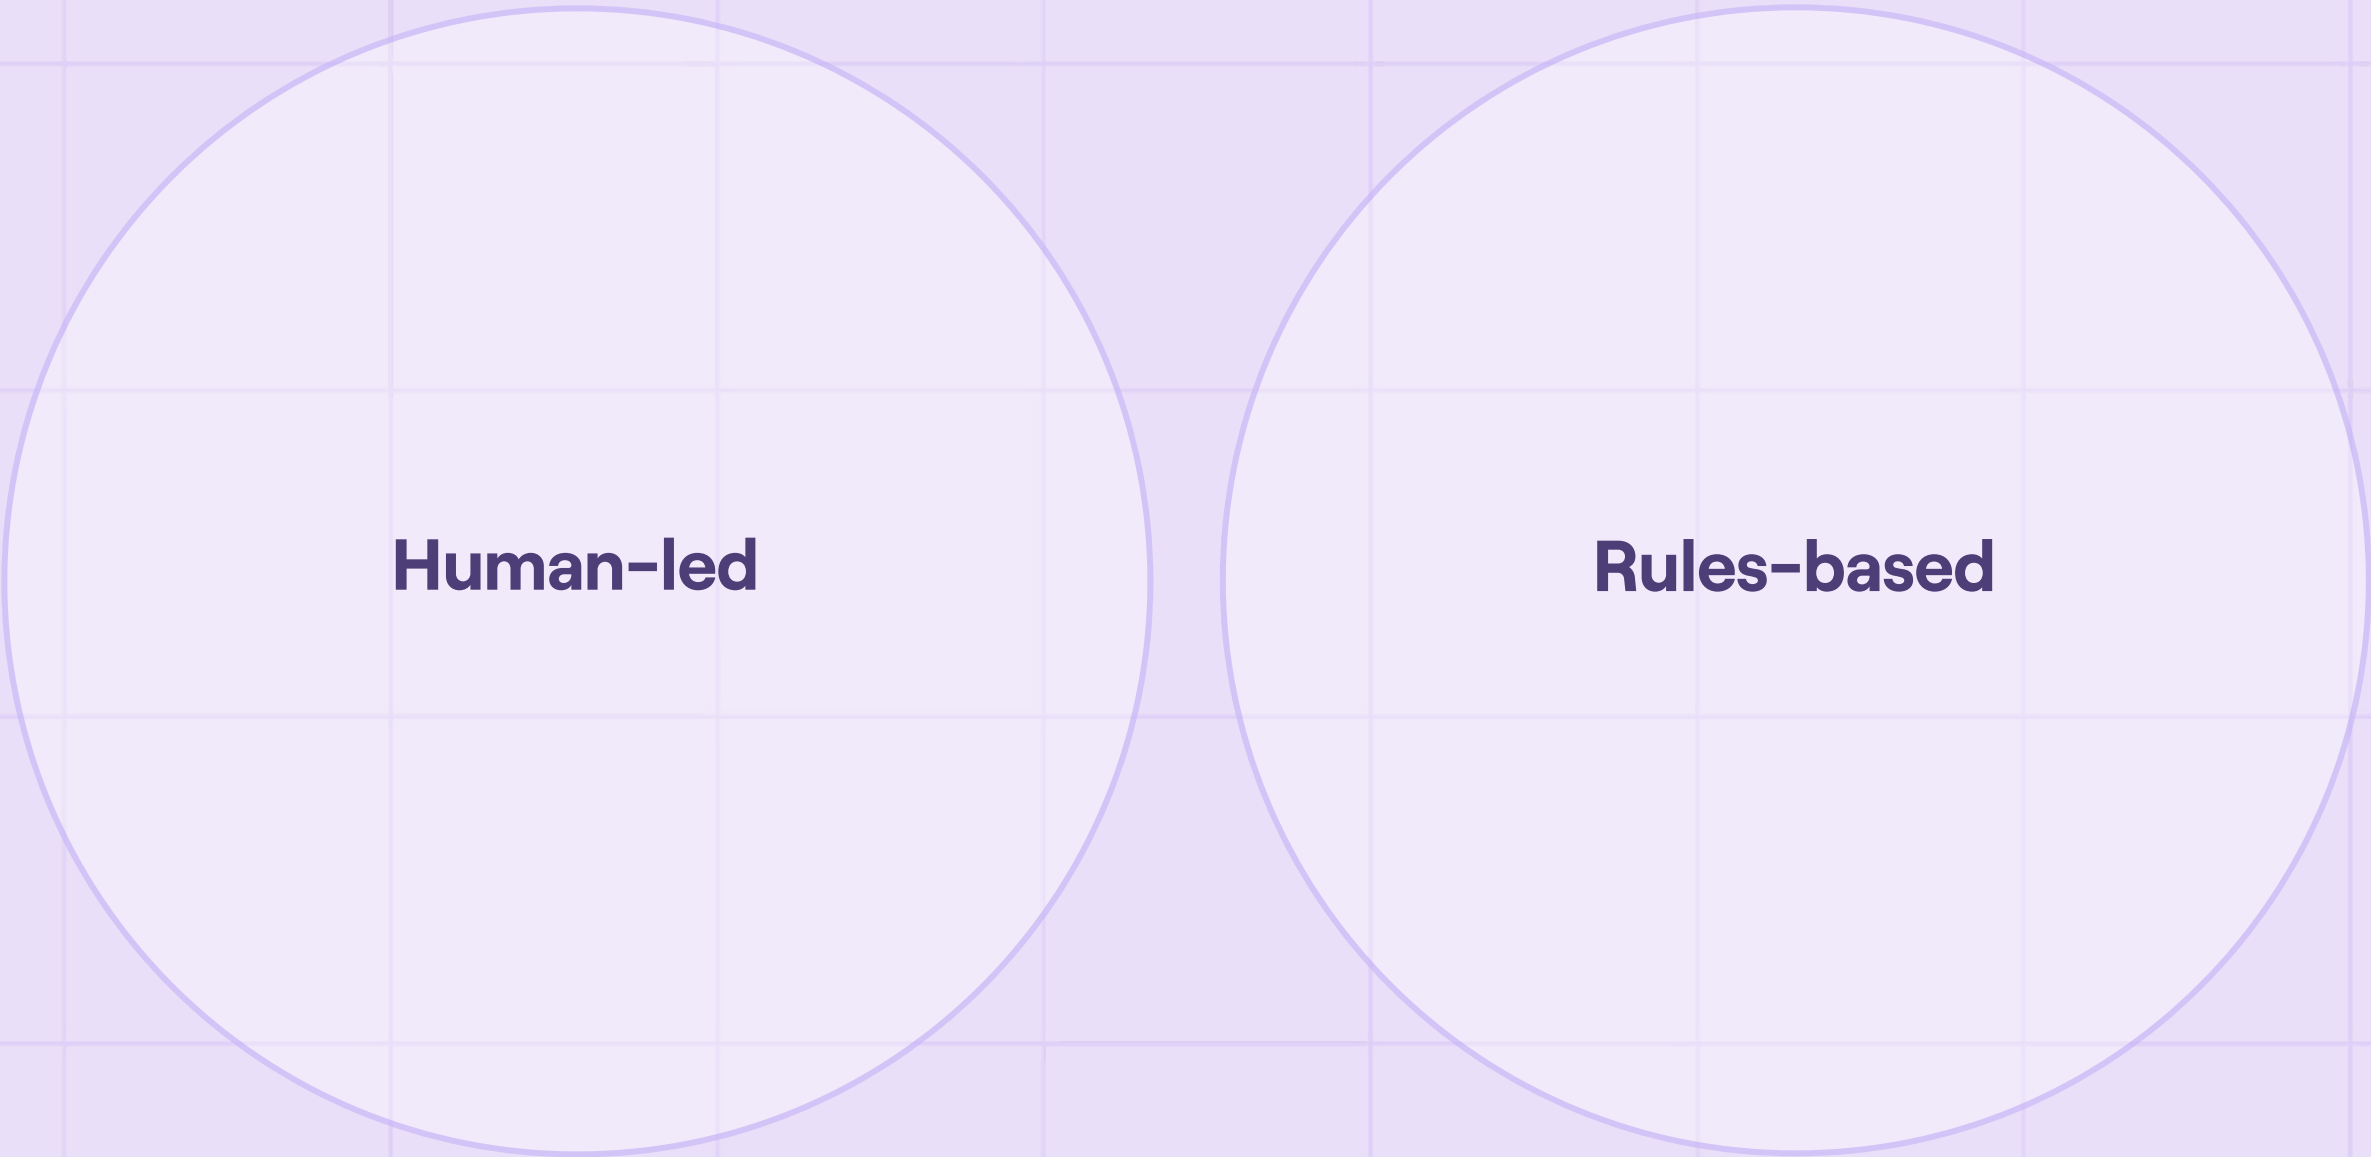

...but practical use cases
have been limited.

Workflows are not new.

Human-led

Deterministic workflows transformed scale and consistency

Human-led

Rules-based

The rise of agentic workflows

The diagram consists of three white circles with purple outlines, arranged horizontally. Each circle contains a label representing a stage in the evolution of workflows. The circles are positioned such that they overlap slightly, suggesting a progression from left to right.

Human-led

Rules based

Agentic

The future of security is built on intelligent workflows

Deterministic

Best for: Volume; mission-critical; predictability; compliance; provisioning; triage and routing; explainability

Human-led

Best for: Strategy; judgement calls; communication; risk assessment; context-based decisions

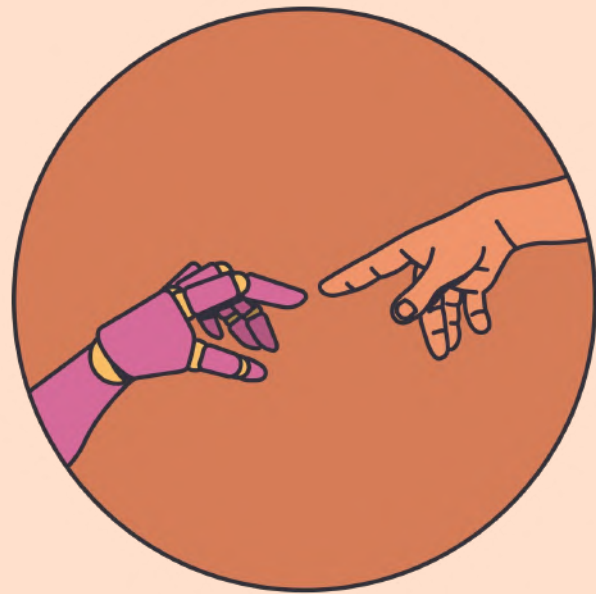

Agentic AI

Best for: Flexibility; ambiguity; simplicity; quick review and escalation; logical next steps and advice; taking safe actions

Misconceptions of AI in SecOps

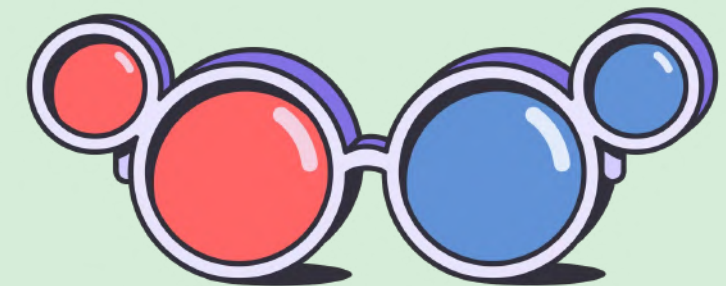

AI will fully replace analysts

AI benefits entry-level personnel most

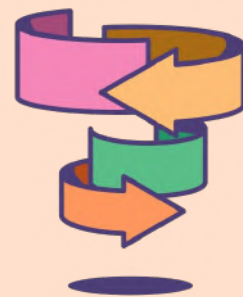

AI provides full environment visibility

Consideration for AI in SecOps

Flexible

From fully agentic workflows to deterministic or a hybrid with human-in-the-loop

Adaptable

Adapts to any alert type and custom remediation actions for your environment.

Scalable

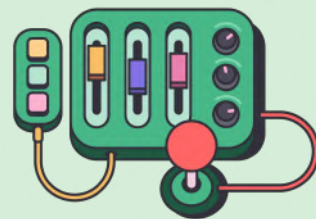

Broad intelligent workflow platform, providing a secure, reliable integration layer that connects teams, tools and data for all your most important workflows.

AI in Tines is private and secure by design

Power and control

- ✓ Bring your own model
- ✓ Tines default model via AWS
- ✓ MCP servers through Tines

Secure foundation

- | | |
|-----------------|-----------------|
| ✓ Tenant-scoped | ✗ No networking |
| ✓ Private | ✗ No training |
| ✓ In-region | ✗ No storage |
| ✓ Stateless | ✗ No logging |
